# Digital Literacy Project Report

**Name :** Gauri Gupta

**Registration No. :** 25BAI11091

**Branch** : CSE(AIML)

**Course Code:** CSE0001

**Year :** First Year(25-26)

**Date :** 23 march,2026

# Introduction

This project focuses on building digital awareness and understanding the importance of responsible online behavior. It includes creating a digital portfolio using platforms like GitHub, LinkedIn, and Kaggle, which help in developing a professional online presence. The project also covers email etiquette and proper communication skills required in academic and professional environments.

In addition, it highlights cybercrime awareness through a case study and prevention tips, helping students understand common online threats such as UPI fraud and phishing. The overall aim of this project is to improve digital skills, encourage safe internet usage, and prepare students for future academic and career opportunities. It also helps in developing better communication and online safety habits.

# Task 1 (Project Report)

For Task 1, I created my design using Canva. It is an easy-to-use online tool that provides many templates, fonts, and design elements, which helped me create a clean and attractive layout. My design shows a simple digital awareness poster that highlights the importance of safe internet usage and responsible online behavior.

While making the design, I focused on keeping the content clear and visually appealing so that it is easy to understand. I used proper headings, icons, and colors to make it more engaging.

One thing I found slightly difficult was selecting the right combination of colors and arranging the elements in a balanced way. However, it was also interesting to explore different design options and learn how small changes can improve the overall look. This task helped me improve my creativity and design skills.

# Task 2 (Project Report)

For Task 2, I created and updated my profiles on GitHub, LinkedIn, and Kaggle as part of building my digital portfolio. Each platform serves a different purpose and helps in my overall development.

GitHub is used to store and manage my coding projects. It helps me keep track of my work and showcase my skills. LinkedIn is a professional networking platform where I can present my profile, education, and achievements, and connect with others. Kaggle is useful for learning data science and practicing with datasets and competitions.

In the future, I plan to regularly upload my projects on GitHub to improve my coding skills. I will keep my LinkedIn profile updated with my achievements and build professional connections. On Kaggle, I will participate in competitions and improve my problem-solving abilities. These platforms will help me grow academically and prepare for better career opportunities.

# Task 3 (Project Report)

For this task, I used platforms like HackerRank and Google Forms to improve my practical and collaboration skills. On HackerRank, I created an account and completed a beginner-level problem, which helped me understand basic programming concepts and problem-solving techniques. It gave me confidence in writing simple code and checking my solutions.

For collaboration, I used Google Forms to create a digital literacy awareness quiz for my classmates. I added different types of questions, including multiple choice and short answer questions. I also viewed the responses in Google Sheets, which helped me understand how data is collected and analyzed.

Through this task, I practised coding as well as creating and sharing online forms. These tools will help me academically by improving my problem-solving skills, enhancing my understanding of real-world tools, and making it easier to collaborate and collect information in future projects.

# Task 4 (Project Report)

In this task, I learned about professional email writing and responsible communication. A common situation of poor digital communication is when a student sends an email without a proper subject, greeting, or clear message. This can confuse the receiver and may result in no response or delay in action.

Such problems can be avoided by following basic email etiquette like writing a clear subject line, using a polite tone, and explaining the message properly. Structured emails help in better understanding and create a positive impression.

Through this task, I learned the importance of clear and respectful communication in both academic and professional environments. Writing proper emails and being responsible on social media are important skills that help avoid misunderstandings and improve overall communication.

# Task 5 (Project Report)

While working on this task, I was surprised to see how common cybercrimes like UPI fraud and phishing have become. Many of these scams look very real, and it is easy for people to trust them without thinking twice. I did not realize that even a small mistake, like clicking on a wrong link or approving a request, can lead to serious problems.

After learning about this, one habit I will change is being more careful while using online payment apps and checking links before clicking on them. I will also make sure not to share my personal details like OTP or PIN with anyone. This task helped me understand the importance of staying alert and responsible while using the internet.

# Conclusion

This project helped me learn many useful digital skills. I got experience in creating designs, building my online profile, and using platforms like GitHub, LinkedIn, and Kaggle. I also learned how to write professional emails and communicate properly in a digital environment. The cybercrime task made me more aware of online risks and how to stay safe while using the internet. Overall, this project improved my confidence in using different digital tools and taught me how to use them responsibly. These skills will be helpful for my studies as well as my future career.
