Task 5 (Cybercrime Awareness Case Study & Prevention Guide)

Part-A

- Choose one of the following cybercrime types: Phishing, UPI/Online Payment Fraud, Identity Theft, Cyberbullying, or Ransomware.
- Write a 200–250 word case study describing: what the crime is, how it typically happens (step-by-step), who is usually targeted, and what the consequences are. You may use a real published incident (with source) or write a realistic fictional scenario.
- Add your case study to task-5-cybercrime/ as casestudy.md or casestudy.pdf

Part-B

- Create a 'Stay Safe Online' checklist with at least 8 specific, actionable prevention tips relevant to college students in India. 23. At least two tips must be specific to financial/UPI safety.
- Include the reporting channel: National Cyber Crime Portal (cybercrime.gov.in) and Helpline 1930.

Part-A : (Case Study)

Cybercrime Type: UPI/Online Payment Fraud

UPI fraud is a common cybercrime where attackers trick users into sending money or sharing sensitive details. It usually starts with a fake call, message, or link that looks like it is from a bank or payment app. In many cases, the attacker tells the user that they have received money or won a reward and asks them to click on a link or approve a request.

Step by step, the fraud happens when the user clicks the link or opens a payment request. Without understanding properly, they enter their UPI PIN or approve the request. This allows the attacker to transfer money from the victim's account. Sometimes, attackers also pretend to be customer care and ask for OTP or PIN details.

Students, elderly people, and those who are not very familiar with digital payments are often targeted. The consequences can include loss of money, stress, and difficulty in recovering the amount.

This case shows that users must be careful while using online payment apps and should never share sensitive details or approve unknown requests.
